

IRC Fiber

YOUR IRC, EVERYWHERE

IRC that remembers everything, on the web, on iPhone and in any IRC client.

A hosted bouncer keeps your networks connected around the clock and your history in one place. The web app, the native iPhone app and your own IRC client all attach to the same session. Free, no ads, no tracking.

October 2026 · ircfiber.com · IRC Fiber on the App Store

IRC forgets you when you close the laptop

- **Close the laptop and you disappear**

A plain IRC connection drops your nick from every channel, and whatever was said while you were gone is lost to you.

- **Staying connected means running a server**

Bouncers like ZNC or soju need a VPS, config files, certificates and upkeep.

- **Phones make it worse**

A phone that sleeps drops its connection, so mobile IRC is a stream of gaps, rejoins and missed mentions.

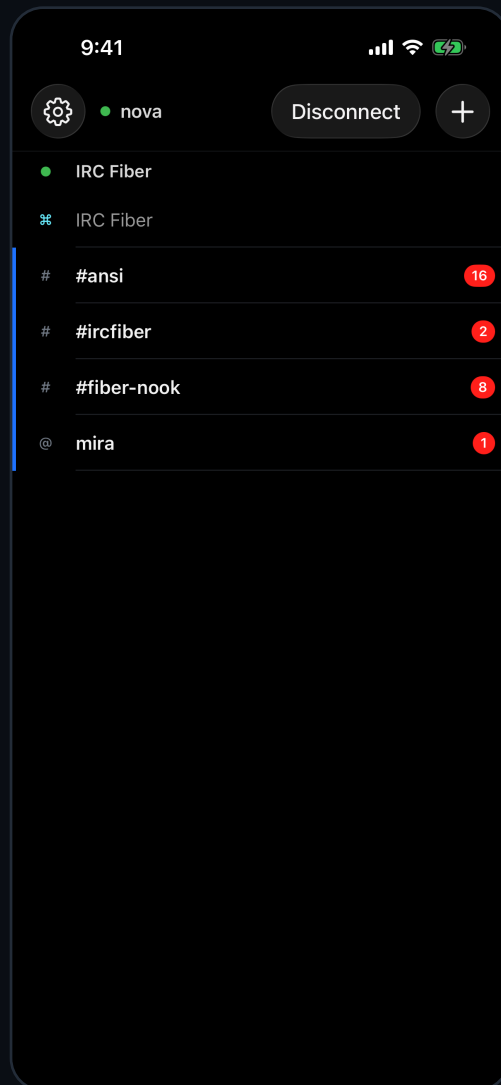

- **Every device starts from zero**

History, read position, highlight words and settings live on whichever machine you used last.

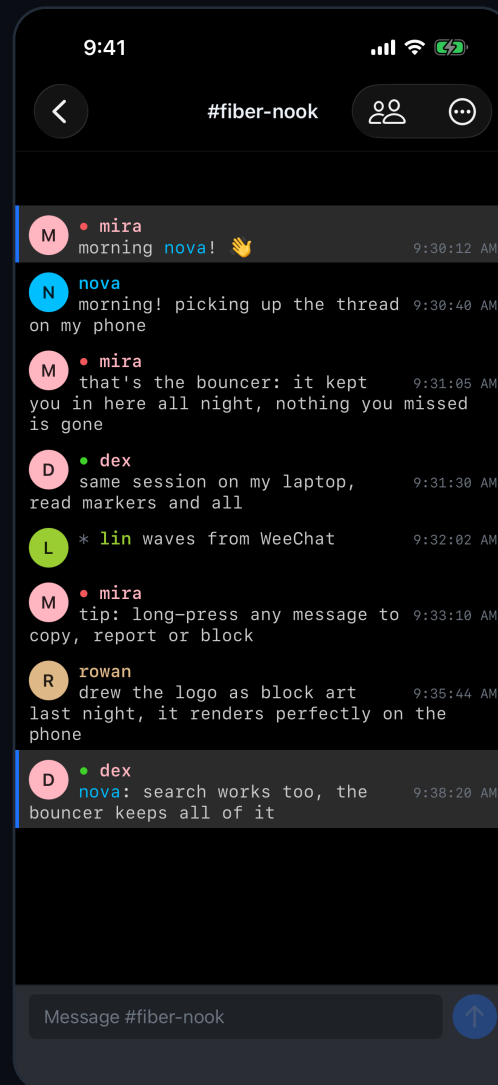

Who this is for

- People already on Libera.Chat, OFTC and other networks for open-source projects, communities and friends.
- People who want IRC on their phone without running a server.
- Communities that want a modern front door to their channels.

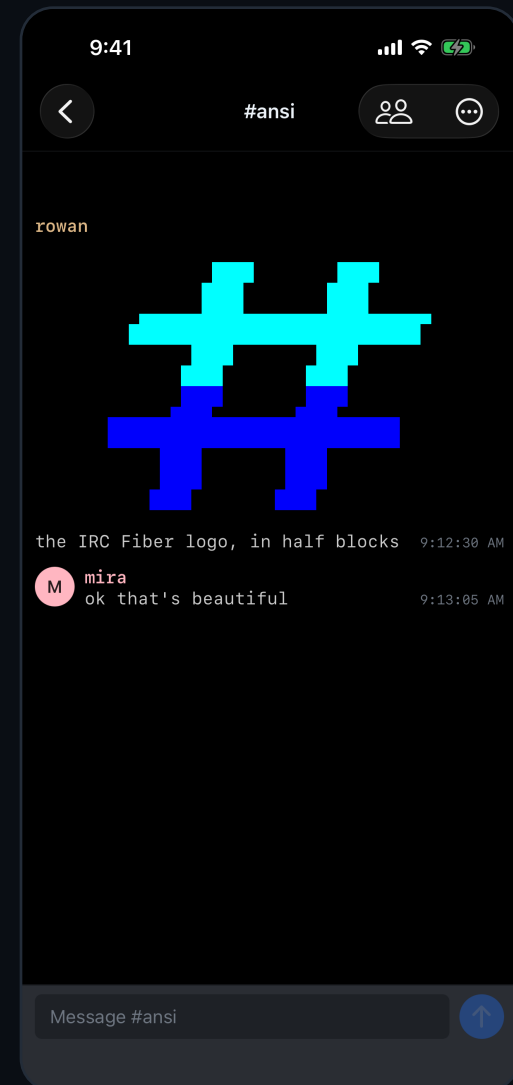

Always on. Every device. Any client.

Your networks and channels

The same conversation as on the web

IRC colors and block art

One session, three ways in

Web

ircfiber.com in any modern browser: uploads, pastes, Convert to IRC art and desktop notifications. Add it to the Home Screen on phones.

iPhone

Native Swift app on the App Store, 1.4 MB, iOS 16 or newer. Sign in with Apple, Google, GitHub or an IRC Fiber account.

Any IRC client

Point WeeChat, irssi, HexChat or any client at bnc.ircfiber.com:7000 over TLS with your bouncer password.

All three share one nick, one set of channels, one history and one read position, because they attach to the connection the bouncer already keeps open.

Bring the client you already use

- **One login, every network**

Your IRC Fiber username reaches every network on your account.

- **History on connect**

CHATHISTORY for clients that support it; recent lines replayed for the rest.

- **Detach without leaving**

With nothing attached you stay joined upstream, the backlog is kept, and an away message can answer for you.

- **Locked down**

Require TLS, allow only listed addresses, cap connected clients, and regenerate or revoke the password any time.

- **Visible**

Connected clients and recent bouncer activity are listed in Settings.

7000

bnc.ircfiber.com, TLS

your username and a bouncer password

Works with WeeChat, irssi, HexChat, mIRC, Textual, Halloy, Goguma, Colloquy and any other IRC client.

Everything a serious IRC client does

Always connected

A hosted bouncer holds your nick in every channel, 24/7.

History that waits

What you missed is there when you're back; older lines page in.

Every device in sync

Read markers, pins, highlights, blocks and settings follow you.

Any network

Libera.Chat, OFTC, EFnet and two dozen more, or any server.

Search on iPhone

Find a message in a conversation and jump straight to it.

Color and ANSI art

mIRC colors and block art render right; Convert to IRC on the web.

Bring your client

WeeChat, irssi, HexChat or any client via bnc.ircfiber.com:7000.

IRCV3 and SASL

SASL PLAIN, SCRAM-SHA-256, EXTERNAL; server-time, chathistory.

On the web: uploads and pastes, inline images and YouTube, an emoji picker, desktop notifications and a Home Screen install.

Nothing to run. Nothing to lose.

- **Hosted, not homebrewed**

No VPS, no ZNC config, no certificates to renew: sign up and the bouncer is already running.

- **One session, three ways in**

The web app, the iPhone app and your own IRC client attach to the same connection, nick and channels.

- **Your settings travel**

Read markers, pins, highlight words, display settings, per-channel preferences and blocks are saved to your account, not to one device.

- **Native where it matters**

The iPhone app is native Swift at 1.4 MB, reconnects by itself when the network returns, and pages older history from the bouncer.

24/7

connected

the bouncer never logs off

3

ways in

web, iPhone, any IRC client

\$0

every feature

no tiers, no ads

TRUST

No ads. No tracking. Nothing to sell you.

- **No ads or analytics**

No advertising, no third-party analytics or tracking; data is never sold or rented.

- **Sign in your way**

An IRC Fiber password, Sign in with Apple, Google, GitHub or Codeberg.

- **Report and block**

Long-press to report a message or block its sender; blocks follow your account.

- **Self-hosted**

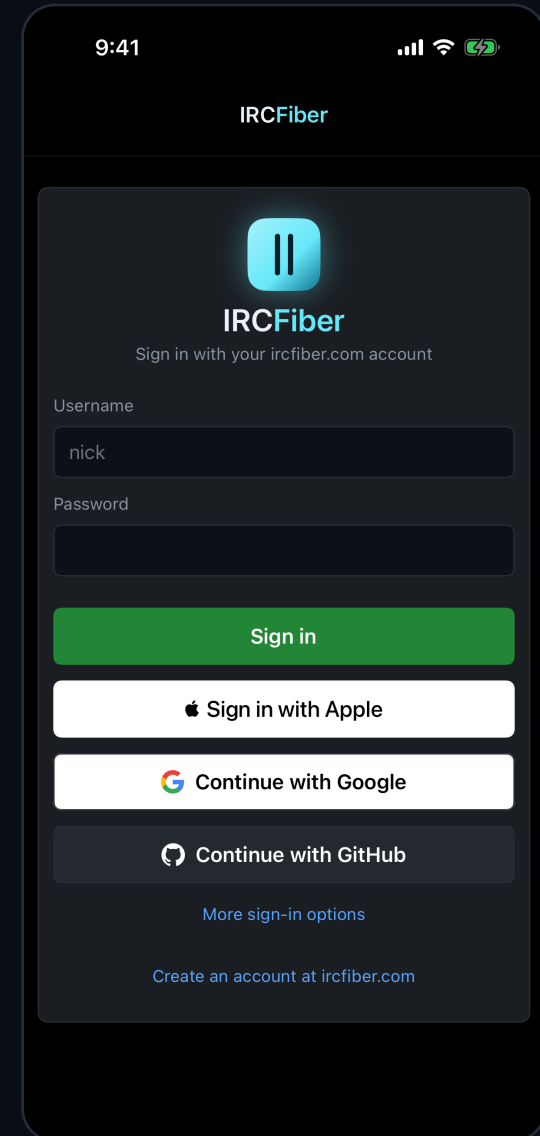

Outside providers are only Cloudflare, email delivery and an IP lookup for abuse prevention.

- **Counts, not content**

Activity records hold how many messages you send per day, never what they say, and expire after 90 days.

- **Delete any time**

In the app or on ircfiber.com: account, networks, history and uploads are erased.

Where IRC Fiber is today

Live today (October 2026)

- Web app and hosted bouncer at ircfiber.com, free for everyone.
- IRC Fiber for iPhone on the App Store: native, 1.4 MB, iOS 16 or newer.
- Bouncer access for any IRC client at bnc.ircfiber.com:7000.
- Sign in with Apple, Google, GitHub or Codeberg; account deletion in the app and on the web.
- Shared account state: read markers, pins, highlight words, display settings and blocks.
- Report and block tools, and a support desk at ircfiber.com/support.

The ask

- Introductions to IRC network operators and communities for the launch.
- People to try IRC Fiber on iPhone and the web.
- Their feedback on what would make it their everyday client.
